Guidebook for Selected Products in Kochi

Greetings

We would like to express our sincere gratitude for your continued support and interest in Kochi Prefecture's manufacturing industry.

Kochi Prefecture is located in the southern part of Shikoku and is blessed with a rich natural environment, including the magnificent Pacific Ocean, the Shimanto River, and abundant forest resources. Building on this natural wealth and the spirit of craftsmanship passed down through generations, a diverse range of industries has developed.

Manufacturers in Kochi Prefecture leverage the unique technologies and expertise they have developed over the years to produce high-quality products. In addition to advanced processing technologies and outstanding development capabilities, a key strength is their flexibility in handling high-mix, low-volume production. By responding carefully to the individual needs of each customer, they provide high-quality, reliable products that are highly regarded across a wide range of industries in Japan and overseas.

At the same time, the business environment is changing significantly amid population decline and growing uncertainty in the global economy. In response, Kochi Prefecture is actively working to advance industries that make use of local resources and expand sales channels into overseas markets under the Fifth Kochi Prefecture Industrial Promotion Plan, which adopts "Local Production for External Markets" as its core strategy.

Our Center has also strengthened its support network across Asia by establishing local support desks in Indonesia and the Philippines from fiscal 2026, in addition to those in Thailand and Vietnam. We also actively support Kochi-based companies in expanding overseas through initiatives such as online business meetings and participation in international trade fairs.

As part of these initiatives, this catalog was created to introduce Kochi Prefecture's outstanding manufacturers and their products and technologies to people around the world.

We sincerely hope that this catalog will give you a better understanding of the advanced technologies, high quality, and flexible manufacturing capabilities of Kochi companies in meeting diverse needs, and that it will lead to new business partnerships.

October, 2026
Kochi Industrial Promotion Center
Chairman : Hirofumi Ikezawa

Introduction of Kochi Prefecture

Kochi Prefecture is broadly facing the Pacific Ocean where the Kuroshio Current washing the coast. The region is also blessed with the beautiful and affluent assets from the nature with the super-clear streams of the waters represented by Shimanto-river and Niyodo-river, and the very deep green mountains in the north. The rich nature of Kochi is also an abundant repository of fresh foodstuffs, so "Kochi's Cuisine" is the big pleasure for the tourists. In fact, the nationwide survey of the major travel agency have repeatedly selected Kochi to be the "Best Choice" in terms of serving many delicious foods special to the local area. The unique history and the cultural climate of Kochi have produced a large number of predecessors like Ryoma Sakamoto, the leading spirits of the Meiji Restoration at the end of Edo Shogunate. In summary, the free and dynamic character of Kochi has brought up broad-minded prefectural nature. The wisdom and the ability of Tosa people with full of ideas have generated a variety of well-considered unique agricultural products as well as industrial technologies. Lastly but not least, the region has been and will continue developing the local unique cultural events, "Yosakoi-Festival" for example of great individuality.

WIDE VARIETY OF PRODUCTS IN KOCHI PREFECTURE

Traditional Industry

In Kochi Prefecture, the Japanese traditional paper “Tosa Washi” and the dried bonito “Katsuo Bushi” utilizing the regional raw materials and also the technologies and products in the agriculture, forestry and fisheries fields that use countryside, mountain and marine resources have been created since ancient times. Further, under the severe conditions with many steep terrains, the civil engineering technologies for post-disaster restoration have been developed. Original ideas and ingenuity are added to them through the efforts of people concerned to result in birth of new products and technologies still now.

Tosa Washi paper

Boasting a history of one thousand years, the Tosa Washi paper was protected as a major special product of the Tosa Domain and enjoyed its prosperity as a traditional local industry in the Paper Kingdom Tosa during the Edo Period. In recent years, it is highly evaluated both in Japan and abroad as the cultural assets repair material with the records that it is not only used for usual “Shodo” calligraphy or for a framing tool “Hyogu”, but also for the repair of artistic collections and ancient documents.

Tosa forged cutlery

It is said that the history of forged cutlery started at the late Tensho period (in the 1590s). At present, Kochi is known as one of the most popular cutlery manufacturing areas of Japan with the fact that there are some products with the 60% market share in Japan among the cutting tools for forest. And also, for example, kitchen knives and outdoor use knives are highly evaluated and conveniently used in Japanese restaurants and in outdoor fields in Europe and U.S.A.

New Industry

In Kochi Prefecture, there are many good raw materials and excellent human resources that can boast in the world as well as many companies possessing the advanced technology.
In Kochi Prefecture where we have been exposed to typhoons, tsunamis, damage from landslide sediment disasters, etc., we are making the best use of the know-how therefor and promoting the “Disaster-Prevention Industry” for civil engineering and machinery, stockpile products, etc. that are to play active roles in the pre-disaster, in-disaster and disaster-restoration fields etc. to fight against disasters and transmitting them both domestically and to the world.
It is an industrial field particular to the Tosa people who are full of ideas in turning weakness into a strength. In addition, Kochi is the most forested prefecture in Japan, with 84% of the prefecture's land area covered by forests. The forestry industry has been thriving in Kochi for a long time, supplying high-quality lumber, and in recent years, the technology and products of companies in Kochi have been widely exported overseas, including many wood products that incorporate the functionality of lumber grown in Kochi.

KOCHI SDGs

Kochi SDGs promoting companies（as of the end of Oct, 2026）

Kochi Prefecture registers companies that are making efforts to achieve the SDGs.

Compact double head side milling machine CS150/Ⅱ

Ideal for 4-sided and 6-sided machining of mold bases and block nesting materials.

Its easy control; the automatic operation contributes to cost reduction; and it is adaptable to high-mix, low-volume applications.
It reduces idle time with its agility from small sizes.
The compact design takes installation space into consideration.
Standard features include safe design, full cover specifications and chamfered underside.
Supports cutting fluid mist and coolant.

Delivery Records
・Major plate manufacturers in Japan and overseas
・CS Series: December 1997 to June 2026, 277 units

Other Information
・CS150 / width 7 mm to 150 mm, length 7 mm to 150 mm, height 5 mm to 70 mm
・CS300 II / width 15 mm to 300 mm, length 15 mm to 300 mm, height 3 mm to 140 mm

Chuo-Seiki Co., Ltd.

https://www.instagram.com/masuseisakusyo/

[Product Features]
・Reduction gears, speed increasers, and variable-speed drives, mainly using spur gears
・Forward/reverse switching
・Multi-shaft gearboxes
・New products designed to meet customer requirements
・Replacement products for products made by manufacturers that have gone out of business
・Non-stop variable-speed drives

[Product Specifications]
・Power: 0.2 kW–1,200 kW
・Gears: Module 0.5–22
・For shipbuilding, hydroelectric power generation, and wind power generation
・Prototypes and test machines
・Other applications

Fine bubble diffusers

High-quality micro-bubbles (fine bubbles) are produced by mixing a liquid (such as water) with a gas (such as air)

Fine bubbles (micro-bubbles) -very small bubbles with a diameter of 100μm or less-have a variety of applications, including water purification, sewage treatment, and boosting dissolved oxygen. The fine bubble diffuser developed by Sakamoto Giken in cooperation with the Kōchi College of the National Institute of Technology:

- Can handle high flow levels (compliant with JIS 15A-50A)
- Will operate so long as it has a pressurized water source
- Is compact and can be added to existing water supplies without taking up too much space
- Has no moving parts
- Requires little long-term maintenance

Cranes used for factories and warehouses

Prevent machinery malfunction with automatic remote control system!

① “High quality and quick delivery crane” manufactured with crane automatic welding system.
② Automatic cargo swing control function for “safe, comfortable, and swift transporting of cargo”
③ “Breakdown-proof industrial machinery” with automatic maintenance and control system using IoT.

Delivery Records
Various industrial machinery makers, etc.

Other Information
For over 30 years, we've worked with crane operators.
By combining our expertise with the latest technology, we've developed the only crane you'll ever need again.
We'll continue to design “cranes anyone can operate easily and speedily” under our motto, “Less time on the crane means more time for productivity”.

Dry Polishing System

Clean dry polishing system, able to execute operations from rough polishing to mirror polishing

The TOSALIT DR series comprises dry polishing media for dry barrel polishing process without using water. This makes it possible to downsize wastewater treating equipment and enhance polishing workability. Environmental burden to rivers etc. by wastewater may be reduced through employment of a dry polishing process, thus making it possible to implement the environmentally friendly production process. With abundant media sizes and polishing machines made available so that operations from rough polishing such as deburring to mirror polishing may be handled, we propose a polishing system to meet your needs, from both aspects of dry polishing machines and dry media.

Delivery Records

■High-energy centrifugal barrel:DC-1000, DC-800 and DC-400 To manufacturers of golf equipment, musical instruments, wrist watches and medical metal fittings;the dental industry;and others.

■Centrifugal Disc system:DR-130 and DR-50 To manufacturers of forgings, pressed parts, automobile components, faucets, etc.

Other Information

■High energy Centrifugal barrel lineup DC-1200, -1000, -800, -400;Models DCB1200, -1000

■Centrifugal disc system lineup Models DR-230, -130, -50 We propose the most suitable polishing machine and abrasive for the purpose of polishing. Contact Mr.Tanaka of the Sales and Marketing Department for inquiry.

Double-head Side Milling Machine WH480A, 530A

WH series models–now easier to use for small to large sizes

KOCHI SDGs

- Minimum working size:5 (H) ×10 (W) ×50 (L) mm
- Maximum working size:150 (H) ×535 (W) ×535 (L) mm
- High-precision and high-speed multi-face machining with high output and high rigidity!
- High-precision heavy cutting is possible based on trust as a long-lasting and stable mass-production machine made of heavy base castings.
- Parallelism is secured with movement of the table between opposing main shafts.
- Optimum for small-volume production in large varieties.
- Vertical and right-angle corrector for the clamping device.
- 3-speaker curvic coupling on the index table.
- One-touch input of material dimensions for offline setup during works. (OP)

Delivery Records

- In Japan:Daido Kogyo Co., Ltd., Daido Amistar Co., Ltd., Fujimaki Steel Co., Ltd., Union Plate Co., Ltd., Ochi Co., Ltd., Yugengaisha Kittou, HCP Product, Ltd., etc.
- Abroad:Korea, France, China and Thailand

YZ-8WR Numerically-Controlled Vertical Milling Machine

Next-generation all-purpose milling machine that reduces setup time for multi-variety and small-batch processing

Combining a mechanically-assisted manual Z-axis handle and a rack-and-pinion spindle feed mechanism for comfortable manual operation with a design that can't be beat in terms of ease-of-use and letting you get close to your work, the YZ-8WR, our flagship product, lets you power quickly through piecework. The handles, levers, and switches are located in just the right spots to make the machine act as an extension of your body, letting you work for long hours without stress. While still a manually-operated two-axis machine, the YZ-8WR features a "Machining guidance function" that can be instantly engaged by switching it on and entering some numbers, taking the guess-work out of milling curves, diagonals, pockets, and the like.

Delivery Records

Customers include equipment and parts manufacturers and machinists, as well as manufacturers, governments, and technical-vocational schools nationwide.

Other Information

Demonstrators are installed in showrooms in our Saitama, Nagoya, and Ōsaka offices, where they can be viewed by appointment. We are also always ready to welcome visitors to our factory.

YZ-8WR Machine Specifications	
Table Size	1400 × 400m
Travel (X × Y × Z)	850 × 400 × 520mm
Spindle Speed	55 ~ 2000min⁻¹
Tapered Bore	7/24 Taper ISO No.50
Rapid Traverse Rate	6000mm/min
Spindle Motor	3.7kw
Floor Space Requirement(W × D × H)	2950 × 1870 × 2499
Machine Weight	Approx. 3700kg

Cultivator "Saisaku"

Saisaku is the legendary cultivator of the famous and successful "Suzue" machine.

It's equipped with the normal/reverse rotary shaft drive mechanism for high utility with minimal power loss. Select from 10 different rotary speeds according to the task, soil quality, and field conditions. It's suitable for a variety of uses, from high-speed to low-speed. The handle features an emergency switch that can stop the engine with a single press. The handle can be manually adjusted between 4 different heights. The main clutch lever has a mechanism that can be turned on and off while holding the handle, which makes it easy to operate. We have wide range of attachments designed for diverse vegetable production, such as our unique multi-groove ditching machine suitable for planting gingers and lilies.

VF810 vegetable bagger

Bag soft vegetables–spinach, komatsuna, chrysanthemum leaves, mizuna, shungiku–at high speed

- Unparalleled work speed (actual speed 600 bags/hour)
- Noise-dampening optimized for indoor installations
- A built-in vacuum pump for reliable bag handling
- Wet vegetables can be bagged without drying
- Bag size can be adjusted at the touch of a button, without need for tools

Delivery Records
Over 850 units (including the earlier VF700 model) to sold in 45 Prefectures nationwide

Other Information
Compatible bag sizes
Width: 180–280 mm
Length: 280–450 mm (rectangular or trapezoidal)

KIREI Stainless Steel Duckboard

Truly lightweight and strong! Smooth pig development like a new swinery!

- Quick and clean dropping of feces
- Stainless steel that does not soak up pathogens
- Almost no sticking of feces
- Only a small amount of water is needed for cleaning!
- Light weight and fully interlocking mechanism
- Super easy to install, much less labor required
- Disease prevention is the biggest benefit

Delivery Records
Haruno Corporation, Kimura Nousan Shoji, Ichikura Shoji, Japan Trading Corporation, JA Minamisatsuma Agricultural Cooperative

Other Information
Series products available in lengths ranging from 1.2m to 2.3m ; other options are negotiable
Product weight ranges from 6.3kg to 11.6kg
Basic widths: 340mm for piglets, 360mm for fattening

Hydraulic Eco-Cutter

Cutting and splitting industrial waste such as waste plastic, vinyl, tires, and wood

Eco Cutter is a powerful industrial waste treatment machine for cutting wastes such as plastic, vinyl, tires, and wood. It is equipped with excellent mechanisms such as an inverted V-shaped cutter structure, four-sided rotating cutter blades, and a cutter blade adjustment mechanism.
The hydraulic type in particular can tilt (oscillate) at a wide angle, making it easy to grab objects from low positions or from piles of waste. It can also be used for feeding into a crusher after cutting, greatly improving work efficiency. In addition, there is less stress on the shovel arm during cutting, and maintenance costs can be reduced after installation.
The Eco Cutter was born from an idea from the field, and has been widely used and well received at industrial waste disposal sites throughout Japan.

Delivery Records
The product has been delivered to industrial waste treatment plants throughout Japan through excavator manufacturers and trading companies.

Other Information
・Target excavators:6 tons to 22 tons (0.25m^3 to 0.8m^3)
・A demo unit is available for trials.

SAIBARA-10:Unit-type Concrete Molding Machine

Unit-type concrete molding machine having “high function”, “high quality” and “low price” realized.

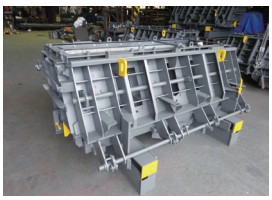

KOCHI SDGs

- Because the product is manufactured consistently in the factory and shipped as a completed from of product, it is possible to supply the product with high quality and at a low price.
- Because the product is unit type, loading, transportation and installation is easy. It is possible to start operation with the product soon after the product is arrired and installed.
- Because concrete supply devices are not required, it makes it possible to reduce the cost dramatically.

Delivery Records
Domestic:Concrete product manufacturing plants in all areas of the country
Overseas:China and Taiwan (expanding sales channels in Southeast Asia)

Other Information
We accept orders to produce products to meet customer’s requests.
We are expanding our business domestically and abroad.

Human and Eco-friendly Hybrid Crane

Next-generation crane for environmental and efficient operations

KOCHI SDGs

At SKK Corporation, we build cranes that protect lives and support vital marine infrastructure. From dredging ship channels to installing breakwaters and wave-dissipating blocks, our cranes help safeguard communities from tsunamis and other natural disasters.
The SKK-1600GE is powered by electric motors supplied by a diesel generator on the barge and features a regenerative energy storage system. When lowering the grab bucket, the system captures the generated energy and stores it in capacitors, then reuses it for hoisting. This system delivers higher efficiency, reduced fuel consumption, and lower emissions.

Delivery Records
We have delivered over 5,000 SKK cranes to marine contractors across Japan, with proven export experience to Asia and other regions.

Other Information
Model: SKK-1600GE
Type: Electric-Driven Grab Dredging Crane
P.L: 30 m^3 (Medium Type)
Boom Length: 32 m
Dredging Depth: Up to 85 m below the water level

CONCRETE PUMP 160-40-8

Small, durable, powerful, high suction efficiency, smooth pressure feed

The product is a concrete pump with the strongest performance condensed into the smallest package. It is equipped with an ideal pumping mechanism that enables the pumping of low-slump ready-mixed concrete (slump of 8cm, maximum aggregate size of 40mm) and the horizontal pumping of ordinary ready-mixed concrete for 800m. It can pump high viscosity materials, mud, water, mortar, and light or heavy concrete. In addition to concrete pumping and spraying in the civil engineering field (for tunnels, dams, bridges, retaining walls, landslides, steel tower foundations, slopes, deep foundation piles, etc.), the product has a wide range of applications in the industrial field, including pumping and spraying of castables (amorphous refractory), pumping of ground improvement materials (liquefaction countermeasures, etc.), and pumping of mud and sludge.

Delivery Records
Construction companies across Japan including Obayashi Corporation, Kajima Corporation, Shimizu Corporation, and Taisei Corporation
Steel companies such as Nippon Steel Corporation and JFE Steel Corporation

Other Information
Our company is a manufacturer of concrete pumps and we also rent our own machines. Full after-sales support is available.

Man-portable in-ground concrete forms

Light, sturdy, adhesive forms that adhere well to concrete

Light, thin, and with high flexural strength and rigidity for use as joint forms, this in-ground formwork can be installed by manual- power alone, without heavy machinery. Cutting is easy, reducing construction time and cost. Products can also serve as in-ground forms for constructing drain (culvert) covers.

In-ground concrete drain-covers

In-ground forms used as a substitute for wooden joint forms

Delivery Records
Used in over 1,650 locations nationwide, primarily for erosion control and landslide prevention projects including improvements, landslide barriers, and retaining walls

Marine Crane

TSUKASA TECHNOLOGY has great performance on the ocean. -Has been developed with our On-site user-

Marine crane, that handling gravel, stone and crashed stone is necessary for ocean public works.
We have developed two systems for handling bucket on marine crane.
High power “LGP” series, and Electronic-Pneumatic control “EP” series.

High-Power system【LGP-Series】
Our original “Cam” system controls the valves.
And Lever input is multiplied by Pneumatic power.
Therefor, although Lever control feeling is light and smooth, machine makes high power.
And braking system with “P1” valve achieves clear feeling at lever control.

Electronic-Pneumatic system【EP-Series】
Computer controls complicated bucket handling works.
So, operator can control the crane with compact joystick handle.
This system makes possible to more easy, comfortable and safer operation.
Operator can acquire operating method in shorter period.

Driving seat for LGP series (with 4 levers)

Driving seat for EP series (with 2 levers)

Wastewater treatment system for highly concentrated sewage (Touchstone System)

We will contribute to the development of environmental technology for a clean global environment.

Our touchstone system is a highly efficient method for treating organic wastewater and is superior in terms of running costs. The main features of the system include:a) a highly efficient oxygen supply by aeration of the contact material, which is mainly made of natural volcanic ash and andosol, b) air bubbles rising directly between the filter media, which prevents clogging of the filter media, the biggest drawback of contact oxidation, c) ease of attaching a biological film to natural silicon dioxide, enabling highly efficient treatment, and d) a high self-digestion rate by various microorganisms, resulting in about half the amount of sludge generated compared to the conventional standard activated sludge method.

Delivery Records

Food manufacturing industry in general, foodrelated raw material processing plants, slaughtering and butchering plants, paper mills, dyeing plants, fish processing plants etc.

"RYUZOKUN" twin-die pelletizing machine

Environment friendly resource recycling technology for pelletizing organic fertilizer, etc.

The "RYUZOKUN" twin-die pelletizing machine's product features：
- Best seller for poultry farmers
- Simple structure that is extremely durable with minimal breakdowns
- Low-temperature granulation process which reduces crushing of raw materials and keeps microbial bacteria and enzymes. These are essential for high-quality biofertilizers, active in the pellets.
- Adapted for automatic operation with low running costs, including low power consumption
- Extremely cost-effective compared with other granulators.

Delivery Records

- Over 360 units sold
- Customers including poultry, cattle, and pig farmers as well as composting centers, and municipal sludge regeneration processors both in Japan and overseas.
- Partnered up with JICA to participate in technology dissemination demonstration projects for livestock farmers in Thailand.

Other Information

KAKIUCHI also conducts pelletizing tests using actual materials, so please feel free to contact us.
Recipient of the 7th Monodzukuri Nippon Grand Award, Shikoku Bureau of Economy, Trade and Industry Director's Award.

Power Suction Work Truck

As Japan's top manufacturer, we are constantly pursuing the ideal design for the power suction work truck. We meet user needs with a wide range of models, so the user can select the optimal vehicle that suits the intended usage conditions.

Power Suction Work Truck is a high-performance suction truck that applies powerful suction for solids and liquids, and it is capable of suctioning for a depth of about 30m and a distance of more than 100m.
It is mainly used for suctioning dirt or sludge at construction sites or sewer cleaning sites, and when disaster such as earthquake or flood happens, it is also actively used for recovery work.

Sales

In Japan:Approx. 500 units in 2025
Customer:Industrial waste disposal company, Steel manufacturing company, Electric power company, Shipbuilding company, MLIT, NEXCO, municipalities
Overseas:Total 257 units from 1976 to 2025
We have sales records all over the world, mainly in Asian countries.

Other Information

Power Suction Work Truck
Flow rate:10-120m^3 /min.

Tanrei (Self-Combusting Rotary Organic Continuous Carbonization Device)

Continuous kiln-type carbonization device for energy savings and high productivity

- **Self-combusting** : Self-combustion starts approximately 30 minutes after burner ignition, eliminating the need for additional fuel costs until production is completed
- **Yield rate of 50%** : While typical yield rates are around 25-30%, our device achieves a 50% yield rate, offering higher productivity and profitability compared to other companies' equipment.

Delivery Records

Approximately 40 units installed across Japan, from Tohoku to Okinawa, including JA, rice centers, biochar manufacturers, and soil improvement manufacturers

Other Information

- **Hybrid system** : Due to the difficulty of introducing raw materials with a moisture content of 30% or more directly into the carbonization device, we utilize the know-how from our main agricultural soil equipment products. By integrating our drying machine with the carbonization device, we repurpose the heat source, resulting in a 30% reduction in fuel costs.

Biomass Pellet Manufacturing Machine

Compact and high-performance with the pelletizer flat die method

Taking advantage of the know-how we have been developing for many years as a precision parts manufacturer, we have secured the body and the structure with high reliability and durability. Further, with an emphasis placed on economic efficiency, it is possible to perform management and operation by one person and the maintenance such as replacement of consumables is also simple and easy. Decrease in the operating efficiency will be limited to the minimum as it is possible to delivery replacement parts in a short time. Without being limited to the ligneous substance, the materials that have been difficult to pelletize conventionally such as bamboos, straws, coffee chaffs, paper pulp, PKS and RPF may be pelletized.

Delivery Records
Major paper-manufacturing companies, Forestry cooperatives, Lumber producers, Beverage manufacturers, etc.

Geo Drain SPD method for soft ground improvement

Vacuum Consolidation Method with PVD which can reduce marine/micro plastic pollution.

Our ground improvement method and materials (PVD & PHD) which can reduce usage of sand/soil material has been contributed to reduce environmental destruction caused by infrastructure construction. Although we can reduce environmental destruction by substituting natural sand by plastic materials, the plastic drain materials cause new environmental problem which called marine/micro plastic. We, more than 10 years ago, developed new and unique drain material which biodegrade in the soil after complete ground improvement.
"Geo Drain SPD Method" which uses our unique biodegradable drain materials, NND (PVD) and BSB drain (PHD), can contribute sustainable infrastructure development by preventing environmental destruction not only by usage of sand but also marine/micro plastic problem.

VACCUM CONSOLIDATION SCHEMATIC DIAGRAM

Other Information

Method is effective for soft clay soil
Maximum depth to improve is approximately 50m

“α-Shine Plate” Ultra-High Luminance Photoluminescent Emergency Exit Sign

Evacuation measures that consume zero energy using state-of-the-art luminescence technology!

This is a luminous product that applies the technology of the "Alpha Flash" series, which boasts the top share of the domestic market for high-intensity luminescent signs (approved for firefighting equipment). It uses a newly developed light-storing pigment with excellent water resistance and complies with JIS outdoor Class II and Class I standards.
The "Alpha Shine Plate" is a super luminous phosphorescent sign made of acrylic resin (PMMA) processed on an aluminum plate and has an outdoor Class II luminous intensity even after ten years of outdoor use. It is used in about 500 locations in Kuroshio Town, Kochi Prefecture, about 300 locations in Konan City, Kochi Prefecture, and in other municipalities throughout Japan as a measure to clearly indicate evacuation routes and evacuation sites for Nankai Trough earthquakes.

SILENT PILER™

Press-in Method with SILENT PILER™

GIKEN manufactures the SILENT PILER™ and offers Press-in Method construction technologies around the world. Featuring low noise, zero vibration, and a compact design, the SILENT PILER™ enables construction in locations where conventional piling methods are difficult to apply, including over-water sites, areas with restricted headroom, and locations close to existing structures.
Among GIKEN Press-in Method technologies, the Non-Staging Method is one of the most widely adopted methods. By eliminating the need for a temporary working platform, it helps reduce construction time and costs while improving overall project efficiency.

Non-Staging Method
Utilizing the GRB™ System, this method enables the construction of structural walls without a temporary working platform.

Zero Clearance Method
Utilizing the specially designed SILENT PILER™, this method allows structural walls to be constructed immediately adjacent to existing buildings, railways, roads, and property boundaries. It also enables more effective use of limited construction space.

Overhead Clearance Method
Utilizing the low-headroom type SILENT PILER™, this method enables construction of structural walls in areas with restricted headroom while minimizing disruption to the surrounding environment and traffic.

Non-Staging Method

Zero Clearance Method

Overhead Clearance Method

Delivery Records

Since the machine's introduction to the market in 1975, the Press-in Method has been adopted in more than 40 countries worldwide.
Visit the GIKEN website for more details.

Genkidayo Safety Notification System

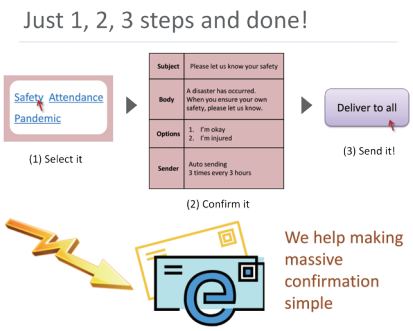

A simultaneous safety confirmation email can be sent immediately in the event of a disaster.

This system is designed to send out emails to registered users simultaneously to confirm their safety in the event of a disaster such as an earthquake or tsunami. The system starts counting at the same time as the emails are sent out, making it extremely easy to quickly confirm the safety of users.
This immediate aggregation function can also be used as an everyday communication network or intranet system, leading to smooth operations in emergency situations. Canned text creation and detailed access control according to the structure of the group organization are possible. Because it is an internet-based service, it can be operated anytime, anywhere, even during power outages, as long as the user has a mobile internet environment such as a cell phone, smartphone, or laptop.

Delivery Records

Gourmet Canned Foods for People with Food Allergies

Emergency Food You'll Want to Eat Every Day, Not Just During Disasters

Based on survey results showing that, during disasters, meals should be "delicious" and "familiar" so as not to cause physical or emotional stress, we produce high-quality gourmet foods based on the concept of "emergency food you'll want to eat every day."
To make our products suitable for as many people as possible, we also take food allergies* into consideration, as allergy-friendly foods can be difficult to obtain during disasters.
*All products are free from the nine specified allergenic ingredients (shrimp, cashew nuts, crab, walnuts, wheat, buckwheat, eggs, milk, and peanuts).

Delivery Records
2025: 29,508 units supplied to five municipalities in Kochi Prefecture

Disaster Relief Toilet 2-way Daichi-kun

Immediate solution for when there are no toilets available!

This product provides an immediate solution to the problem of "having no toilets available or temporary toilets not being delivered" in preparation for a large-scale disaster.
During normal times, ten assembled simple flush toilets and disaster supplies are stored in an underground stockpile tank, and in the event of a disaster, evacuees themselves can take out the assembled toilets from the tank and assemble them to create a large-capacity temporary toilet that can be used by 500 people for approximately 30 days.
Recommended for schools, daycare centers, and other locations that serve as community shelters! The product is also used by companies and the Self-Defense Forces at their disaster recovery bases.

Large tank capacity suitable for 500 pers by 30days. Usable for temporary sewage tank.

Delivery Records

Kochi city Josai Junior High School, Kochi Prefecture Japanese Red Cross Blood Center, Japanese Red Cross Aichi Disaster Management Center, Aisai City, Aichi Prefecture, NEXCO West Japan Kochi Expressway Office, Aki City Seisuigaoka Junior High School, Ioki Nursery School, Akano Elementary School, Ananai Elementary School, Inokuchi Elementary School, Aki City Stadium, Daiichi Elementary School, Aki Junior High School, Shimanto-cho Okitsu Nursery School, Kubokawa Junior High School, Shiwa District, Higashimata District, Kochi City Asahi Elementary School 27 locations / 35 bases (as of the end of March 2027)

Other Information

In case of a disaster, we have devised a variety of ways so that even people who see the Daichikun for the first time can immediately understand how to use it. This is our commitment to universality to ensure that people can still use the product 30 years from now. *The product can be customized according to the needs of customers. *It is recommended for schools, hospitals, evacuation centers, disaster relief centers, etc.

LED solar security light with seismic sensored auto-unlock key box and evacuation shelter sign board

Security light with a box that unlocks when shaken by an earthquake

Normally, the LED lights are automatically turned on after sunset using solar power stored during the day, and then turned off at a set time. The security box will open when an earthquake is detected, and at the same time, the security light and shelter indicator will light up. Including the keys to evacuation centers and stockpiles in the security box can make evacuation easier.

Other Information

Evacuation shelter sign/LED 96 units acrylic sheet 400 × 550 × 55
Lighting:1,000Lm or above white light, ultra-high intensity white LEDs 48 units
Wind speed 60m/sec, solar part/sealed lead-acid battery 12V17AH × 4, expected life 10 years 10-hour timer
Lighting height / 3.8m
Material/power box:steel plate, pole Φ 120mm steel pipe, security light
Body:aluminum die-casting, lighting:acrylic
Operating temperature:-10℃ to 50℃ , storage temperature:-30℃ to 70℃ , no sunshine guarantee:80W 4 days

Guardian Prefabricated Large Block

NETIS registered, i-Construction compatible retaining wall block

A new NETIS-registered and patented technology for various road retaining wall projects for disaster prevention and mitigation, as well as disaster recovery work.
Self-supporting blocks consisting of front and rear concrete panels connected by steel members are used in place of retaining wall formwork. By changing the length of the steel members, the blocks can be manufactured with a uniform thickness or with varying thicknesses where the front and rear slopes differ. At construction sites, no specialized formwork skills are required. Retaining walls can be easily constructed by repeatedly stacking the blocks and placing infill concrete. Reducing formwork processes and simplifying construction significantly shorten the construction period and improve overall work safety. The steel-frame structure inside the retaining wall also greatly improves seismic resistance.

Delivery Records

Japan: 93,700 m^2
Projects commissioned by the Ministry of Land, Infrastructure, Transport and Tourism (MLIT), prefectural civil engineering offices, and municipalities

Other Information

Dimensions: Large type: 1,665 mm × 1,000 mm × 500 mm
Small type: 1,250 mm × 800 mm × 450 mm (varies by shape)
Weight and price: Varies by shape. Panel patterns: Imitation stone, stone cladding, pearskin finish, etc.
Japanese patents: Two patents obtained: No. 6359733 / No. 6359750 for retaining wall blocks, NETIS registration SK-210001-A, trademark registered
Overseas patents: Acquired in Taiwan, India, Thailand, Indonesia, the Philippines, and Malaysia; trademark registered in Vietnam
Recognized as a Kochi Prefecture Disaster Prevention-Related Product, certified under the Kochi Prefecture Model Ordering Systemacquired in Taiwan), and certified as a product subject to the Kochi Prefecture Model Order System in 2019.

Cstream-1 High-performance, Ultra-compact Turgo Turbine Generator

KOCHI SDGs

The Cstream-1 is a powerful and compact hydro turbine. Featuring a high-performance coreless generator and a dedicated rapid-charging control unit, it converts hydraulic energy into electricity with maximum efficiency—delivering 200W of power at a flow rate of 5.5 L/s.

By pairing the Cstream-1 with a DC/AC inverter, the stored battery power can be converted into 100V AC to run a wide variety of electrical devices.

Delivery Records

31units

Other Information

What can you power with the Cstream-1 (200W) ?
The continuous 200W output charges a battery system, allowing you to easily power everyday appliances via an inverter :

- Refrigerator (30W)
- LED Lights (30W)
- Television (30W)
- Laptop (20W)
- Printer (18W)
- Smartphones (5W each / up to 5 phones simultaneously)

Hyakusanchin Tofu Bean Curd Jerky (Emergency Food)

Plant-based source of protein

One bag provides approximately 20% of the daily protein intake target (11.8 g) needed during a disaster, along with 127 kcal per 40 g bag.
This jerky has a moderate firmness and chewiness, providing a satisfying eating experience. The only allergen among the 28 specified ingredients is soy. Since no animal-derived ingredients are used, it is suitable for vegetarians. The product is vacuum-sealed, making it compact and lightweight, and easy to store even in limited spaces.
This is a gluten-free and vegan product.

PALA Lead Pipe Solar Guide Light

Our unique electrical circuitry will guide people to evacuation sites safely and securely.

The lead pipe solar guide light "PALA" is equipped with our unique electric circuit and is strong ally during nighttime disasters.
LED lights are installed in the guard pipe to evenly illuminate the area around the feet.
The handrails are free from protrusions and do not get hot, so you can safely climb up and down slopes and stairs while holding them.
One set of the lead pipe solar guide light "PALA" can provide light for approximately 100 meters.
Even if the solar panel cannot be charged after 20 days of rainy weather, it will always turn on when it detects an earthquake.
Also, the storage batteries do not require replacement maintenance for more than 10 years.
We can design the product according to various conditions such as installation location, usage and budget.

Special Elastic Rubber TS Seal

Special seismic elastic rubber that prevents water from seeping through joints

Special elastic rubber with excellent elasticity, durability, and weather resistance.
The TS seal maintains strong adhesion and semi-permanent elasticity, and does not harden over the long term. In addition, the product has excellent earthquake resistance and permanent water sealing, and entails a special construction method that can be used for water and sewage pipes, underground common utility duct joints, and underground methane gas explosion-proof joints, and it is also used for lifelines such as oil and gas.

Delivery Records
Used by many local governments across Japan for water supply and sewerage propulsion works, underground methane gas explosion-proof construction methods, underground common utility duct construction, and seawall repair works

Other Information

Bleaching Paper Hairdressing Supplies

Target exactly where you want to dye!

KOCHI SDGs

Product Features

- Specialized paper designed to fully support the outcome of bleach touch-ups, work efficiency, and easy cleanup
- Features a dual-layer structure with one layer for absorption and another for water resistance
- Prevents application of chemicals on unnecessary areas, ensuring an even finish
- The absorption side on the front absorbs moisture and excess chemicals generated by the bleach's chemical reaction, preventing dripping
- The water-resistant side on the back blocks chemicals, prevents drying, and maintains the effectiveness of the bleach
- Combines these functions to prevent chemical application to unnecessary areas, ensuring an even finish
- Easy to pick up with one hand, improving work efficiency
- Made from soft special paper that adheres closely to the curvature of the head, preventing uneven exposure to air
- Strong against chemicals, won't tear or dissolve, and won't clog drains
- Suitable for straightening treatments and inner coloring

Lira Single toilet rolls(60 per case), Lira Double toilet rolls(60 per case)

These special watermarked toilet paper rolls are a secret known only to a few

A source of company pride, Lira toilet rolls feature an extremely rare type of watermark created using local traditional Japanese papermaking techniques lovingly handed down from generation to generation for a refined, restrained touch unlike that produced by prints. Our toilet paper is made exclusively from carefully-selected natural pulp, which is combined with water from the clear-running Niyodo River and then slowly and painstakingly screened. The resulting paper is soft yet tear-resistant and notable for its suppleness. A total of five different watermarks are available; you won't know which one you'll get until you open the package (we're sorry, but customers cannot specify a watermark when ordering).

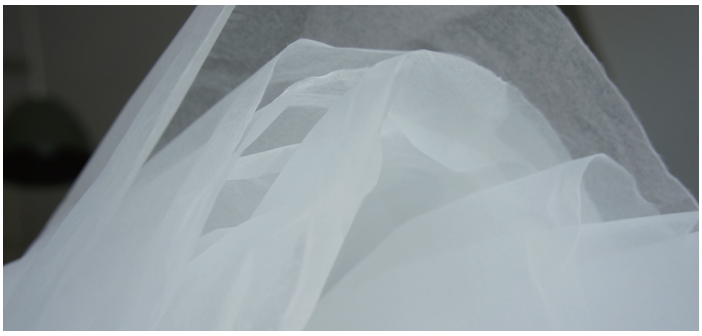

Delivery Records
Available to individuals and hotels by mail order.

Nanofiber Nonwoven Fabrics

Nanofiber overlaid nonwoven fabric that surpasses conventional concept.

Our original manufacturing technology has developed stable and state of the art mass production process in nanofiber spinning. The product achieves a pore diameter of 10μm or less, which is difficult to be achieved with conventional technologies.
It has a proven track record as a mask filter with a low pressure drop (making it easy to breathe in) without reducing the trapping efficiency of fine particles. We are also engaged in the development of air filters and battery separators.

Rurikon Tosa Washi Paper Coffee Filter

Praised by professionals! A Tosa washi paper coffee filter that brings out the true flavor of coffee beans

This coffee filter is made from Tosa washi paper.
1. Experience coffee aroma and flavor directly: This filter is made from washi paper created from the fibers of kozo (paper mulberry) and karamushi (ramie), without using pulp.
   It has twice the number of pores compared to conventional paper pulp filters, allowing hot water to pass through twice as fast and delivering the coffee's aroma and flavor directly.
2. Eco-friendly: The packaging is environmentally friendly, with everything except the film wrapping the filter being made of paper. The origami-style washi wrapping is reusable.
3. Reusable: The filter can be used 3 to 5 times.

Other Information
Contains three coffee filters (for 1 to 4 cups)

Avonlea Keith moisturizing paper

The world's first moisturizing paper developed for delicate skin

KOCHI SDGs

The 100% pure pulp tissue paper is carefully crafted and blended with a moisturizing ingredient that captures an appropriate amount of moisture from the air, and naturally derived squalane is also added.
With a moist and soft touch, it is safe to use for colds, rhinitis, hay fever, etc., as well as for small children and those who want to gently care for their delicate skin.
The moistening ingredient blended tissue was released for the first time in the world in 1993.

Kaminication File Washi Paper-Covered Clear File

A paper holder assembled with rare traditional Japanese washi techniques using rakusuishi water drop paper

Rakusui-washi is a rare, uniquely Japanese type of washi made using a technique in which water is dropped onto the paper during the papermaking process to create patterns. The result is a beautifully designed, translucent paper. This Rakusui-washi is laminated with polyethylene and polypropylene to create a clear-file-style stationery item, a popular type of document folder in Japan. It is water-resistant, and its semi-transparent appearance and smooth, dry texture give it both functionality and a premium feel. It is ideal for presenting documents to valued customers or for use as a promotional item.

[Specifications] Rakusui-washi laminated with polyethylene/polypropylene
[Sizes] A4: 310 × 220 mm; A5: 220 × 155 mm

Adhesive sheet "Type FK"

It can be easily attached and peeled off on smooth surfaces, and also can be used repeatedly.

FK is adhesive sheet which contains no adhesive agent, and used for non-slip mat. Besides non-slip mat, it also can be used as a substitute for adhesive agent, adhesive tape, Velcro, magnet, etc.
While type FK is a sheet with acrylic foam coating on the surface of wet-laid nonwoven fabrics which were produced from our factory, this acrylic foam can be coated on the surface of PET films and fabrics with low breathability, so that customers' original FK tape can be made in accordance with individual requirements.

Maximum size, maximum absorbency urine pad 1800

Maximum size, maximum absorbency urine pad

KOCHI SDGs

You can rest assured until morning with the largest size and maximum absorbency that no other company offers. It has a gourd-shaped design that fits the crotch. The product prevents slippage and leaks. Furthermore, the maximum size（38 x 71cm）that completely wraps around the hips offers reassurance.
A fluffy sheet is used on the part of the product that comes in contact with the skin to gently protect the skin. In addition, the back sheet is made of a soft cloth-like breathable sheet. It allows moisture to escape and prevents dampness.
We support a comfortable life by designing products with the user in mind.

Japanese Laminated Bamboo Board and Veneer

Rare Japanese laminated bamboo

We are one of the few manufacturers of laminated bamboo in Japan.
We process Japanese Moso bamboo without using chemicals to create laminated board. The adhesive used in the production of this laminated board has a low formaldehyde emission, meeting the JIS F ☆☆☆☆ standard.
We also provide veneers sliced thinly from the laminated board. These veneers can be used as decorative materials applied to plywood or MDF.
Bamboo grows much faster than timber wood, making it a sustainable and environmentally friendly material. It can be used for a wide range of applications, from small items to construction materials.

Wood wool, essential oil, buntan juice

Genuine sustainable materials

A sustainable cushioning material made by the only company in Japan specializing in wood wool. The wood wool, which was started in 1961 when my father, who was a mine operator, established a wood and wool business, is carefully crafted by craftsmen who purchase wood from Kochi Prefecture from raw logs, by peeling and cutting the bark, and by looking at the grain of the wood.
The wood wool, which contains the power of Kochi's trees, is a buffer material, yet people who see it for the first time often remark on its beauty. The passion for craftsmanship of the Japanese people is reflected in the wood wool, who believed that giving a gift is the same as giving one's heart.
In addition to solar power generation, the recycling-oriented manufacturing process that produces zero waste wood through wood biomass-type drying is a material that embodies genuine SDGs in an environmentally friendly manner.
Applications include cushioning materials for fruits, foods, ceramics, etc., plant mulch, vegetative sheets.
In 2022, based on the wood processing technology cultivated through the production of wood wool, we also started a distillation business of essential oils using the steam distillation method. We also began selling juice made from the buntan fruits that are a byproduct of the distillation process. We deliver nature's bounty by utilizing unused materials to their fullest.

KUMIKO LOAD BEARING WALL

Japanese modern design bearing wall

This Japanese modern structural wall has excellent design based on Japanese Kumiko patterns.
We have been able to use the Kumiko technique in a revolutionary way to make a new, stronger bearing wall for buildings. These walls have enhanced ability to resist horizontal impact from earthquakes and strong winds. This bearing wall using the Kumiko technique is a new innovation in Japanese architectural technology. By repeating this design pattern in bearing walls, a building like a birdcage can be made.
Put simply, it has become possible to design architecturally superior buildings without using shielding walls.

JAPANESE SPA

100% Natural Forest Thinning Eco-friendly Hinoki Product

KOCHI SDGs

Hinoki products of TOSARYU are made from aromatic Japanese Hinoki cypress which is a natural by-product of the forest thinning process. Hinoki wood is prized in Japan for its appealing, bracing scent. JAPANESE SPA is an environmentally friendly product which is made entirely from recovered by-product of the Hinoki wood manufacturing process of TOSARYU.
JAPANESE SPA contains a highly aromatic Japanese wood called "Hinoki". The Hinoki wood will bring a natural and pleasant citrus scent to your bathroom. Drop into your bath or hot tub and treat your senses to the calming and rejuvenating effects of "bask" in a Japanese forest.

Ofuro de Chapu Chapu

Float them in the bath, scoop them up, and feel like a little fisherman.

KOCHI SDGs

Eleven creatures that swim in the vast ocean have been turned into wooden toys. They are made from hinoki cypress, which is highly resistant to water. To preserve the natural texture of the wood, they are finished without paint or coating. Float them in the bath or water and scoop them up with the net for pretend fisherman play. They can also be stacked without toppling for a balancing game, or returned to the box and enjoyed as a puzzle.

Mass Flow Controller/Gas Mixer

Controlling gas flow automatically with high accuracy, mixing gas easily

◇ Mass Flow Controller ◇
Because automatic flow control is performed by measuring the mass flow rate of gas, there is no need to make corrections due to changes in factors such as the environmental temperature and operating pressure, making this controller capable of accurate and stable measurement and control.
◇ Gas Mixer ◇
This device is equipped with a mass flow controller to control the flow rate of each gas according to the desired flow rate ratio, and an inline mixer to mix the gases.

Other Information
In addition to the standard gas mixer, customized gas mixers can be designed and manufactured according to your needs and budget.

Organic Bedding

We are 120% organic

KOCHI SDGs

We are not satisfied with just 100% organic.

SaFo pursues further 'safety and security' beyond GOTS certification. We offer '120% organic quality' by protecting the environment that involves everyone from the producers of raw materials to those who manufacture and use our products. We not only adhere to world-class organic certification standards of GOTS, but we also renew our certifications of rigorous international standards each year, going beyond just manufacturing and products to include packaging, accessories, and the production environment. Additionally, we implement thorough quality control measures, including blacklight inspections. We are 120% organic.

Delivery Records

IC Bordeaux (Copper fungicide)

Complies with the Organic JAS Law. Exceptional residual effect. No usage limitations on the number of days before harvest or the frequency of application.

KOCHI SDGs

IC Bordeaux is a copper fungicide, the copper compound, the same as "Bordeaux Mixture" made from lime and copper sulfate. It is an easy-to-use agricultural chemical that reduces the time of preparation by hand. This environmentally friendly fungicide effectively targets pathogenic microbes on a wide variety of fruit trees and vegetables. Its active ingredients are inorganic, meaning there is no risk of developing drug-resistant bacteria. Thanks to its superior adhesiveness and rain-fastness, it maintains its protective and bactericidal effects for a long period. For over 30 years, it has been trusted on more than 30 different farm products, including grapes, citrus, peaches, apples, and tomatoes, with its safety and high effect firmly proven. Farmers in Korea, China, Taiwan, Thailand, and Vietnam also recognise the quality of IC Bordeaux, which is offered in three types of solutions to meet the specific needs of various crops.

Delivery Records

Red coral prayer beads

Precious Coral — Symbol of Protection and Peace

For centuries, coral has been treasured in Japan as a symbol of protection and good fortune. These traditional 108-bead prayer beads are carefully handcrafted by Japanese artisans using precious coral. They can be used for Buddhist prayer and meditation, or simply carried as a personal talisman for protection and peace of mind. More than jewelry, they are a meaningful piece of Japanese tradition — something to treasure and pass down from generation to generation.

Other Information
We belong to Kochi Coral Cooperative Association, and only deal with genuine natural gem corals.

PAN OISHIIMAMA (Keep Bread Delicious)

A bag designed to keep your bread deliciously fresh

"Pan Oishiimama" is a storage bag specially developed to keep freshly baked bread in the best possible condition.

- Keeps the aroma of freshly baked bread inside the bag, allowing it to settle into the bread
- Reduces condensation and frost formation
- Prevents odors from the freezer from transferring to the bread and protects it from drying out, helping maintain its quality
- High barrier properties help prevent mold growth even at room temperature

Increasingly adopted by quality-focused bakeries!

Repellent Spray against Hornets

Repellent against hornets without killing them by using the scent of apricot flowers

This is a revolutionary hornets repellent developed through a university venture. This spray agent will quickly repel hornets and turn off their attack instincts, allowing a safe escape. The main ingredient is the scent of flowers, which has little effect on bees but a dramatic effect on all wasp families, including hornets.

Fish Leather Products

Connected to the Vast Ocean

The fish leather brand “Ocean Leather” was established in Kochi in 2021, focusing on discarded fish skins.
Fish leather uses fish skins nurtured in the beautiful seas of Kochi, as well as skins from fish commonly processed for food. Artisans meticulously craft these skins into an eco-friendly and unique material. Lightweight and durable, its one-of-a-kind design evokes the essence of Kochi’s sea with every use.

Product Features
- Uses eco-friendly vegetable tannins
- Diverse and colorful
- Each piece has a unique appearance
- Made from discarded fish skins turned into leather
- Lightweight and durable
- Smells like regular leather products
- Entire production process from leather to sewing done in Kochi Prefecture

TOSA santok forged knives(Nickel Damascus steel 33 layer VG10)

Enjoy the taste of seasonal ingredients. The good cutting quality makes work more pleasant.

Cooking seasonal ingredients with this sharp knife will make cooking more enjoyable. A Santoku knife is the most common kitchen knife in Japanese households. It can be used for all kinds of fish, meat, vegetables, and fruits. The blade is double-edged and can be used by either right- or left-handed users. The steel used has a 33-layer structure consisting of stainless steel and VG 10, a high-hardness, high-carbon material.
A beautiful Damascus pattern like the grain of wood spreads over the entire surface of the blade, creating a sense of luxury.

Gensuke Clean

Zero equipment costs. Lakes, oceans, and rivers can be revived simply by adding GS bacteria.

In FY2019, we were selected by the Ministry of the Environment for an environmental technology demonstration experiment, and we were currently conducting a demonstration test verification. (Demonstration number: 020-1902)
We have achieved effective water purification by combining granular and liquid forms to improve odors and reduce sludge at a low cost.
This product helps people restore the correct laws of nature without the use of chemicals or any other artificial power.
Unlike forced methods, once the natural cycle is restored, only a few more inputs are needed to maintain the beauty of nature for a long time to come.
